business object paper

reel-management in SAP® -
material management

22.07.04

Our “Business Object Paper” – bop – is designed to support the entire range of your paper procurement activities:

- It is specifically developed as an aid for your purchasing and accounting people
- It is offering roll-related ergonomic displays for all paper storage handling.
- It is connecting you to your suppliers via papiNet using first-class data and interfaces.

- If your accounting is poor or missing,
- if you have trouble communicating,
- if you lack overview regarding your rolls in stock,
- if you suffer too much waste,
- if you have to deal with poor roll-quality...

Bop will provide you with a perfect solution to all your day-to-day procurement problems.

what is bop ?
the link in the paper procurement

Taktik
Prozessoptimierung

“automated stream of data and goods from the paper mill to the newspaper”

22.07.04

Bop functions as the link between the paper manufacturers and the newspaper/magazine publishers.

Paper being a natural product. It is of the most importance that you have quick and actual information at hand. It is only then, that you can respond immediately.

An automated data-flow supported by feedback in closed loops – stabilises the entire environment and thus provides for fewer fluctuations in quality and less waste in print.

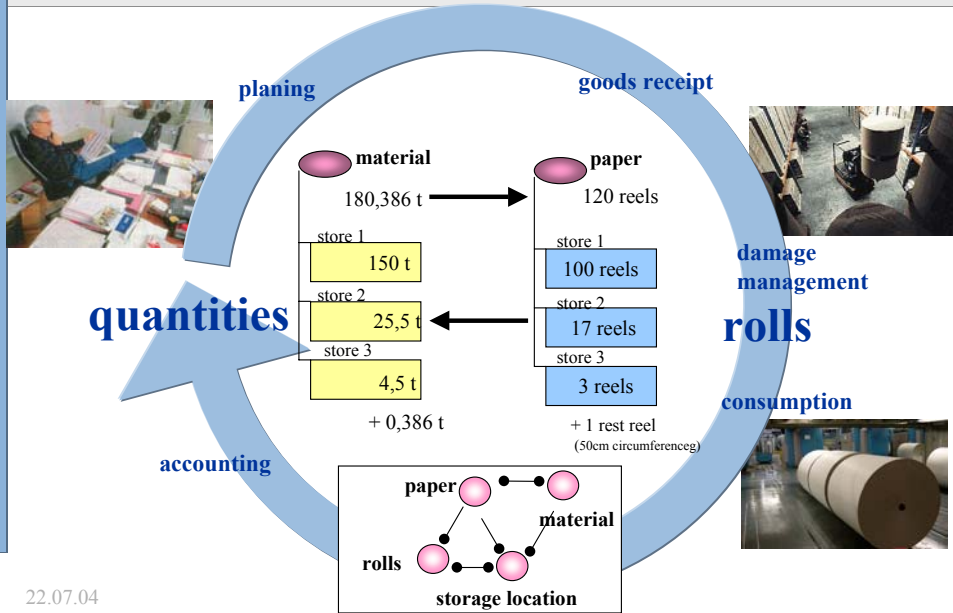

Process transparency is just a side-effect and, because bop is located ”right in the middle of SAP” – accounting even beyond your company or group will never be a problem:

bop does it in a fast, direct and transparent way.

bop

double entry inventory control with different view

Taktik
Prozessoptimierung

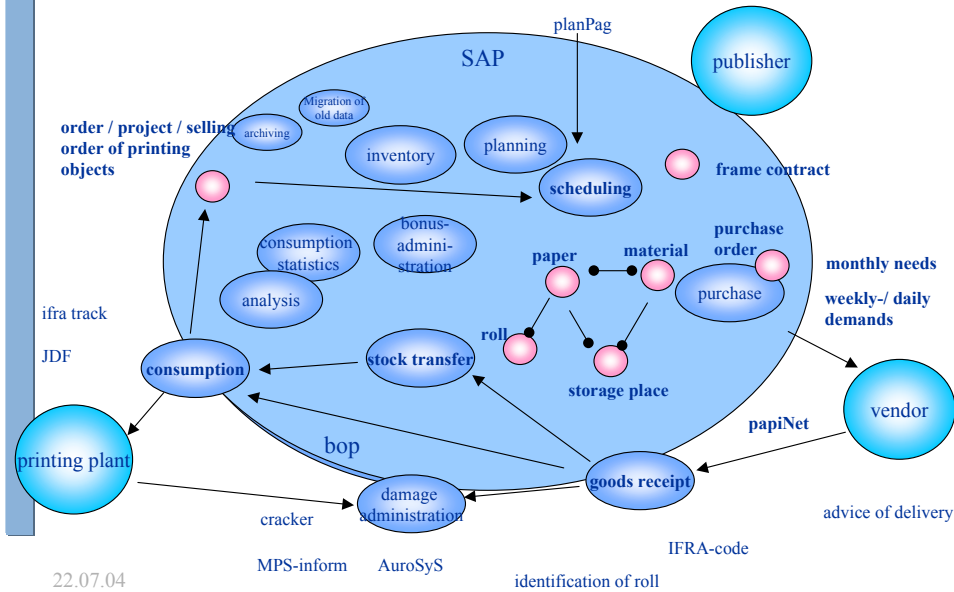

Bop's secret is its double-entry inventory control. Whenever you deal with quantity, our system will show you quantities. If you are working with single roll identification, bop will provide you with the details. Each roll is given a history of its own, you can relive it all the way, cancel it at any point, document it, whenever you like.

Damage evaluation has stopped being an issue. Via papiNet every supplier can, if he wants to do so – get direct and fast information relating to the whereabouts of his paper in the printing process and thus is able to act immediately. While job printing, the printer can optimise the paper quality whenever necessary, i.e. just in time.

what is bop ?

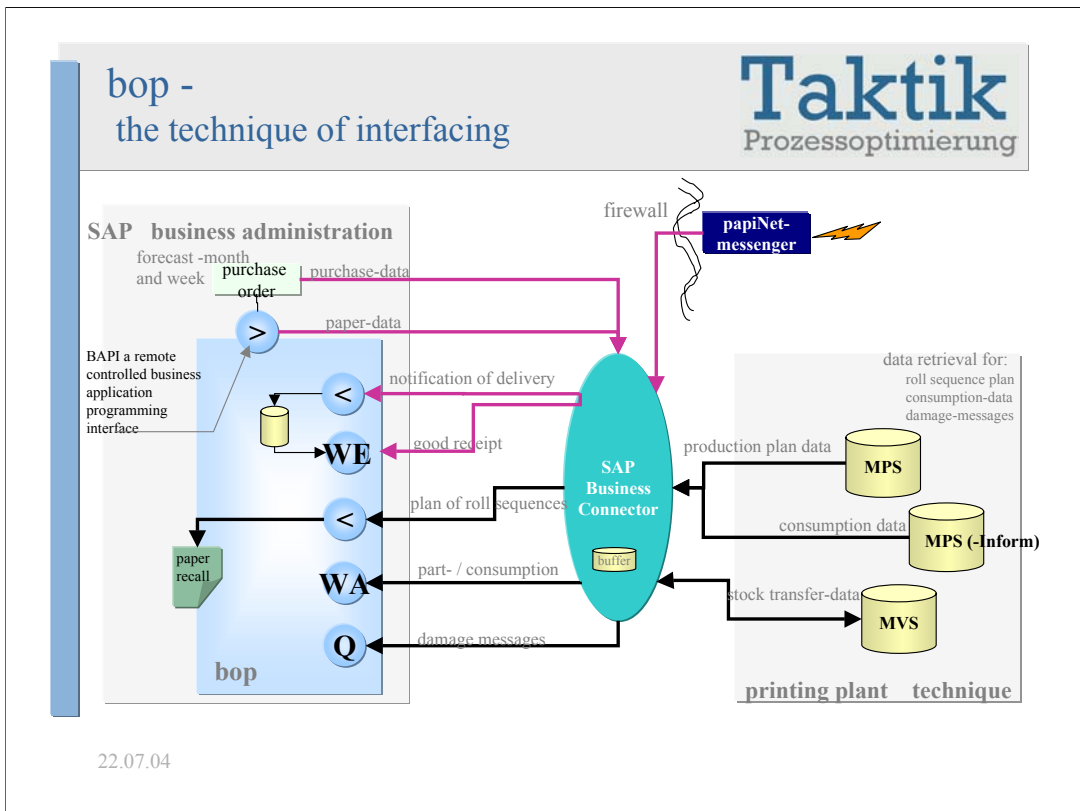

paper procurement process chain

Taktik
Prozessoptimierung

Planning, disposition, inventory control, quality management, damage analysis, accounting, evaluation, - even recording of procurement orders – master data, demand specification, actual-to-target analysis in quantity and results:

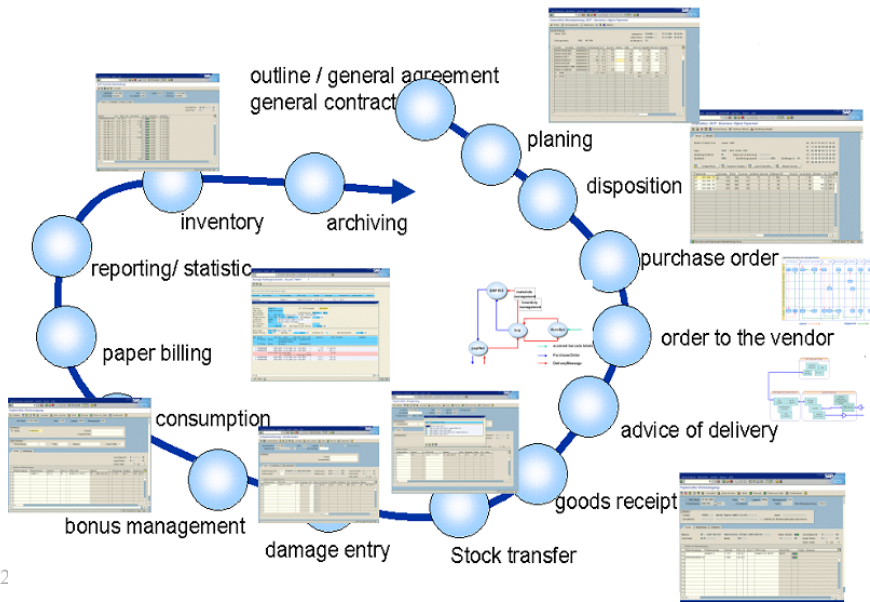

bop gets all necessary functions ready for processing, so you do not have to jump a number of masks, you do not have to compromise anywhere. Your people will be free to manage "by exception", while bop is doing all the routine work. All processing is fully automated, insofar people are no longer involved.

Regarding interface techniques we are not compromising:

- there is a clear line between production and administration
- there are optimised and fully automated data flows and
- there are the most modern IT-tools of the SAP environment: mySAP.com[®], SAP-Netweaver[®]

bop aids papiNet and JDF.
